The Setup

- ▶ 1 lowly technology coordinator (me)
- ▶ 6 high school seniors
- ▶ a new K-12 school website

Step 1: List the types of users

- ▶ elementary students
- ▶ high school students
- ▶ teachers
- ▶ parents
- ▶ grandparents
- ▶ school officials

Step 2: Create a persona to represent each class of users

Sally is a 17-year-old senior who likes to hang out with her friends and chat online. She loves taking pictures for the yearbook and never misses a ball game.

Jim is Sally's dad. He doesn't trust Sally to drive his new truck to all those ball games she insists on going to, so he drops her off and picks her up at the school for each game. Being a single parent, Jim is also in charge of cooking the meals at home.

Step 3: What features does each character want?

Sally goes to the website to find out when that book report is due. She also wants to see the pictures from last night's game. Oh, and if they're serving mystery meat tomorrow for lunch, she's bringing her own.

Jim has to schedule his time off work around Sally's ball games and visits the website to check the schedule for the upcoming week. Sally harps at him if he fixes the same thing for dinner as she had for lunch, so he checks the day's lunch menu as well.

Step 4: Tally up the features

Feature	Number of Personas
lunch menu	5
upcoming events	5
photo gallery	4
homework assignments	2
games	2
board minutes and policies	3
job listings	2
recent events (newsletter)	3

Step 5: Design the website

- ▶ Place the most common features on the front page where they are easily found.
- ▶ Consider accessibility:
 - ▶ The typeface should be large enough (or resizable) so that the grandparents can read the site.
 - ▶ Since broadband isn't available in this area, the site needs to be a small download. Don't use large images or Flash or require other multimedia extensions/plugins.
